Documents from the State Secretariat for Chemistry, Stones and Earths indicated that, on 26 November 1952, a conference on the production and delivery of concrete camouflage paints to the Soviet Air Force was held by a Soviet air force colonel and a major from an SCC office, two German representatives of the State Secretariat, including Mr. Weber (fnu), and a representative of the Lackfabrik Osterwieck, who was called in later. The Soviet air force commission thoroughly inspected brown, green and red samples of the oxylid camouflage paint, developed by the paints producing factory, and inquired painstakingly about the production possibilities, the capacity of the available machinery, and the raw material situation at the Lackfabrik Osterwieck. The factory was ordered to develop and submit a brownish tint for future delivery and to procure raw materials for the production of at least 400 tons of camouflage paints. The commission stated that the matter was urgent and that the order would be given immediately after the choice of the tint had been made. While the Soviet air force colonel was chiefly interested in the camouflage effect and the quality of the paint, the administration major discussed the prices demanded.

25X1 Comment: The oxylid camouflage paint developed by the Lackfabrik Osterwieck, which is produced on the base of emulsion, is weather-proof and is suitable for application to concrete. The Lackfabrik Osterwieck at 15 Vor dem Schulzendor, Osterwieck, Harz, has belonged to the VWS der Farben- und Lack-Industrie since 2 July 1952.
